## Education

### Worcester Polytechnic Institute (WPI)

Worcester, MA

Master of Science in Robotics Engineering, GPA- 4/4

May 2019

**Related Courses:** Deep Learning, Computer Vision (Udacity Nanodegree), Robot Dynamics, Robot Controls, Swarm Intelligence, Foundations of Robotics, Smart Materials, Motion Planning\*

\*To be completed by December 2018

### Sri Ramaswamy Memorial University (SRM)

Tamil Nadu, India

Bachelor of Technology in Mechanical Engineering, CGPA- 3.71/4

May 2017

## Skills

**Programming Skills:** Python, MATLAB, C++, Buzz

**Software Skills:** PyTorch, Tensor Flow, Keras, OpenCV, ROS, Catia, Latex, SolidWorks, Microsoft Office, Argos

## Projects

### Predicting Grade of Road for Autonomous Vehicles Using Supervised Deep Learning.

WPI

Deep Learning

September–December 2017

- Built a Convolutional Neural Network and trained it on a labeled dataset of IMU and GPS readings to predict the grade of the road ahead of the autonomous vehicle.
- Carried out video parsing, data filtering and data augmentation. Analyzed the performance of the model by observing the real-time video implementation of the results.

### Facial Key point Detection

WPI

Computer Vision / Deep Learning

July 2018

- Designed an algorithm to detect 68 key points on a face (to identify features such as eyebrows, eyes, nose, lips and facial contour) by applying computer vision and deep learning techniques.
- Applied various transformations on the image dataset and developed a CNN using PyTorch.

### Adaptive trajectory Control of a Robotic arm subject to Varying Payloads.

WPI

Robot Controls

March 2018- April 2018

- Modelled an adaptive trajectory tracking controller on a 2-link Robotic arm to carry objects of unknown masses while maintaining its desired path.
- Modified the conventional approach, resulting in a simplified and much more efficient performance.

### Robotic Control of Surgical Laser Waveguide using ABB IRB120 Robot

WPI

Robot Dynamics

February 2018- April 2018

- Performed dynamic modeling and control of the ABB IRB120 robot mounted with a laser waveguide, to follow certain trajectories and carry out tissue ablation. Developed a Python code for generating trajectories.
- Simulated using Gazebo and MoveIt.

### Automated Cinematography Motion Planning using Unmanned Aerial Vehicles

WPI

Motion Planning

October 2018- Present

- Deploy a Motion planner for an Unmanned Aerial Vehicle to perform Automated Cinematography on a subject while keeping it in the camera frame and accounting for obstacles.
- Test the results in a simulated environment for various kinds of camera shots.

### Solving Relocalization for SLAM using Vision.

WPI

Directed Research

September 2018-Present

- Carry out Relocalization in a previously mapped environment using Visual Slam based approach.
- Implement feature descriptor algorithms and compare the results with the database to identify a location in the environment.

### Occlusion based Collective transport of concave objects using Khepera IV robots

WPI

Swarm Intelligence

March 2018- April 2018

- Decentralized collective transportation of concave objects using Khepera IV robots.
- Implemented occlusion-based transport strategy on the object and used Argos simulator and Buzz programming language.

## Extra-curricular Activities

- Co-founded an NGO called "Hind Towards Change" to create awareness and promote sanitation, education, fundamental rights, government schemes etc.
- Received awards in sports such as cricket, swimming and table tennis. Proficient in sports such as badminton and squash.
- Part of the school orchestra and play instruments such as tabla, piano and guitar.
